

Kenworth T880 Now Available in All-Wheel Drive

LAS VEGAS, Nev. – Kenworth’s flagship construction truck, the T880, continues to broaden its application reach, and is now available in an all-wheel drive configuration. The front drive axle is installed at the Kenworth factory, which speeds delivery time and saves costs for customers.

“For severe duty applications where the ultimate in traction is required, our new configuration is a welcomed spec,” said Kurt Swihart, Kenworth marketing director. “We see our all-wheel drive T880 being used in oil fields, configured as an off-road crane, in utility and construction work, or used with municipalities and fire/rescue. The Kenworth T880 represents the ultimate in toughness and durability for all applications.”

The Marmon Herrington MT-22 front drive axle is available in a 6x6 or 8x8 Class 8 configuration with a capacity rating up to 22,000 pounds. The all-wheel drive configuration requires a Fabco transfer case, and can be specified with Fabco’s 1-speed TC-142 or 2-speed TC-143 transfer case, depending on customer requirements.
