

Kenworth T680 Now Standard with Bendix Front and Rear Air Disc Brakes

KIRKLAND, Wash. – The Kenworth T680 on-highway flagship is now standard with Bendix® ADB22X™ front and rear air disc brakes.

Bendix ADB22X Front and Rear Air Disc Brakes

The pairing is a result of Kenworth now offering Bendix ADB22X rear air disc brakes as standard. The Bendix ADB22X front air disc brakes have been standard for several years.

Bendix ADB22X air disc brakes offer superior braking performance, shorter stopping distances, enhanced safety, light weight and lower overall maintenance costs. The two-pin floating caliper design provides consistent force distribution. The design also significantly reduces brake fade with no degradation of stopping power, according to Bendix.

“Fleets and truck operators purchasing new Kenworth T680s can benefit from the superior performance, automotive-like feel, lightweight design, and ease of maintenance offered by Bendix ADB22X front and rear air disc brakes. These brakes also exceed the federal government’s RSD (reduced stopping distance) requirements for enhanced safety, offer extended brake change intervals, and provide weight reduction,” said Kurt Swihart, Kenworth marketing director.

For more information about Bendix ADB22X air disc brakes, contact your Kenworth dealer or visit Bendix Spicer Foundation Brake at www.foundationbrakes.com.
